Title	Sparrow Day
Date and Time	Mar 20, 2022
Venue	Sanjay Gandhi Animal Shelter Care.
Resource Person/ Facilitator	Programme Officer Rotaract - Mr. Vinod Kumar
No. of Participants	30

Summary	<p>The Rotaractors of Rac DSPSR took an initiative under scheme "Life on Earth" and visited the Sanjay Gandhi Animal Care Shelter on the occasion of World Sparrow Day. Sparrows are small yet attractive birds. This bird is found all over the world including India. The sparrow is a very nimble bird. There are many species of sparrow found. The sparrow has small wings. Its beak is yellow and the color of the feet is brown. Its body is light grayish-black. They usually have black spots on their neck. Male sparrows and female sparrows are different in appearance. Male sparrows are more attractive than female ones.</p> <p>A sparrow is an omnivorous bird. It eats seeds, grains, fruits and insects etc. Sparrows generally build their nests in the roof of houses, buildings, bridges and hollows of trees. In urban areas, these birds often nest in the houses of humans. Due to pollution and other reasons, these birds are on the verge of extinction. According to the ornithologists, people should provide some places in their homes for their shelter, where they can easily make their own nest and lay their eggs. So that these invasive birds can be saved. These are some basic steps that should be taken to protect these birds from the predator birds.</p>
